

## StreetSmart® Upgrades for the Segway® Patroller

**More of what you need.** Patrolling doesn't just happen during the day and when you need warning lights, you need them more than directly in front. StreetSmart utilizes Whelen high-intensity, wide-angle, ultra-bright Super-LED lights positioned for 360° visibility to give you the most reliable and effective warning system available. Siren? We have that too! And all StreetSmart components are powered off rechargeable 12v batteries so you aren't changing out AAs every few shifts. With the optional wireless remote control, you can engage the lights or siren even if you step away from your Patroller.

For a **Front Driving Light**, we added a Whelen® ultra bright high intensity white Super-LED wide angle light designed for heavy-duty performance and mounted it on a swivel bracket for adjust-ability.

Our light-weight and compact black **Siren** is a single tone, 110 decibel original. We created it with a volume control so you can crank it up for those loud events, or turn it down when you're inside.

The StreetSmart **Soft Side Cargo Bag** is water resistant with an adjustable inside divider, outside zippered pockets, and unlike the hard cases, it works with the Patroller! It even has an inside sleeve for your zip-tie hand cuffs. Finish off the other side with another Soft Bag or our **Cargo Plate Cover**.

Our black powder-coated 12 gauge steel **Police Light Bars** utilize Whelen SmartLED® heavy-duty lights. With white front driving lights and flashing red tail lights, you're safer in the dark. When you turn on your warning lights, each side lights up with 4 alternating high intensity, wide angle Super-LEDs in red and blue flashing lights giving you true 360° visibility.

To make things even easier, StreetSmart has created an extremely compact **Remote Control System** for managing all the lights and siren from a single controller mounted on the handle bar or attached to a key fob. The encrypted wireless signal gives you superior security while the long range transmitter allows you to engage the lights or siren even if you step away from your Segway.
